1-14. (Cancelled)

15. (New) A method for correcting digital images produced by a digital camera, comprising the steps of:

identifying the camera type used to produce the digital images from image data provided by the camera;

correlating said camera type with correction values specific to the camera type to correct flaws common to images captured with said camera type; and

adjusting all of the images produced by the camera according to said correction values.

16. (New) The method according to claim 15, wherein information identifying the camera type is hidden in the image data provided by the camera using a steganographic method.

17. (New) A device for determining correction values for digital images produced by a camera, comprising:

identification means responsive to digital image data produced by the camera for detecting the camera type that captured the digital image; and

control means for determining camera type specific image correction values as a function of the identified camera type; and

means responsive to said control means for correcting the digital images produced by the camera, whereby all of the images produced by the camera are corrected according to said correction values.
